

# FUME HOOD INSPECTION & MAINTENANCE

Fume hoods are safety devices designed to capture, contain and remove contaminants generated inside the fume hood's chamber. Those can include vapors, gases and dusts of toxic, flammable, corrosive or otherwise dangerous materials.

ANSI/AIHA Z9.5 recommends annual fume hood inspections to ensure fume hoods are performing correctly. Hallmark Casework's inspections include an evaluation of face velocity, sound, containment, monitor performance and the tracking ability of VAV (when applicable).

Proper fume hood maintenance and safe work practices are key to user safety. Contact us today to receive a quote for inspections and/or maintenance for your fume hoods.

During the inspection process, our technician will inspect the fume hood for any preventative maintenance that may cause issues in the future.

## Components Inspected

- Airflow Monitor System
- Baffle System
- Bearings and Pulleys
- Belts and Cables
- Ductwork
- Electrical Services
- Electromechanical System
- Interior Wall Surround
- Light Functionality
- Plumbing Services
- Sash Operation
- Superstructure
